N85-10913
TITLE
REPORT NUMBER
PAGE NUMBER
NASA ACCESSION NUMBER

Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

Microwave-powered, unmanned, high-altitude airplanes p 155 A85-16241

Turbulent roughness drag due to surface waviness at low roughness Reynolds numbers p 181 A85-16243

A validation methodology for fault-tolerant clock synchronization
[AIAA PAPER 84-2648] p 193 A85-17835

Recent advances in electroluminescent displays applicable to future crew-station interfaces
[AIAA PAPER 84-2663] p 164 A85-17845

An advanced media interface for control of modern transport aircraft navigational systems
[AIAA PAPER 84-2686] p 165 A85-17865

A simulator application of a 'hands-on throttle and stick' concept to a transport pilot/autopilot interface
[AIAA PAPER 84-2687] p 165 A85-17866

Flight study of induced turbofan inlet acoustic radiation with theoretical comparisons p 197 A85-18513

The influence of leading-edge load alleviation on supersonic wing design p 144 A85-18515

Spectral methods for the Euler equations. I - Fourier methods and shock capturing p 185 A85-18684

Emmons spot forcing for turbulent drag reduction
p 145 A85-18698

An incremental block-line-Gauss-Seidel method for the Navier-Stokes equations
[AIAA PAPER 85-0033] p 207 A85-19470

A multistage time-stepping scheme for the Navier-Stokes equations
[AIAA PAPER 85-0035] p 207 A85-19472

Turbulent flow around a wing-fuselage type juncture
[AIAA PAPER 85-0040] p 208 A85-19475

Vortex research facility improvements and preliminary density stratification effects on vortex wakes
[AIAA PAPER 85-0050] p 209 A85-19482

A theory for the core of a three-dimensional leading-edge vortex
[AIAA PAPER 85-0108] p 210 A85-19524

A comparison of Euler and Navier-Stokes solutions for supersonic flow over a conical delta wing
[AIAA PAPER 85-0111] p 210 A85-19526

A comparison of finite volume flux vector splittings for the Euler equations
[AIAA PAPER 85-0122] p 211 A85-19533

Numerical solution of the Euler equations for high-speed, blended wing-body configurations
[AIAA PAPER 85-0123] p 211 A85-19534

Studies of condensation effects on airfoil testing in a transonic cryogenic tunnel
[AIAA PAPER 85-0229] p 274 A85-19603

Application of axisymmetric analogue for calculating heating in three-dimensional flows
[AIAA PAPER 85-0245] p 216 A85-19611

Measurements of water film characteristics on airfoil surfaces from wind-tunnel tests with simulated heavy rain
[AIAA PAPER 85-0259] p 274 A85-19618

Subsonic pressure distributions near a wing-fin juncture on a supersonic arrow-wing configuration with wing-mounted vertical fins
[AIAA PAPER 85-0276] p 217 A85-19628

Study of winglets applied to biplanes
[AIAA PAPER 85-0279] p 217 A85-19631

Euler calculations for multielement airfoils using Cartesian grids
[AIAA PAPER 85-0291] p 218 A85-19641

Spectral methods for modeling supersonic chemically reacting flow fields
[AIAA PAPER 85-0302] p 219 A85-19651

Designing a priority driven multi-frame rate flight executive
[AIAA PAPER 85-0309] p 266 A85-19656

Hypersonic characteristics of an advanced aerospace plane
[AIAA PAPER 85-0346] p 269 A85-19685

Determination of rarefied-flow aerodynamics of the Shuttle orbiter from flight measurements on STS-6 and STS-7
[AIAA PAPER 85-0347] p 219 A85-19686

An attached flow design of a noninterfering leading edge extension to a thick delta wing
[AIAA PAPER 85-0350] p 220 A85-19689

Recent advances in computational transonic aerodynamics
[AIAA PAPER 85-0366] p 221 A85-19699

Breakdown of the conservative potential equation
[AIAA PAPER 85-0367] p 221 A85-19700

Potential flow calculations and preliminary wing design in support of an NLF variable sweep transition flight experiment
[AIAA PAPER 85-0425] p 248 A85-19741

Correlation and analysis of oil flow data for an air-breathing missile model
[AIAA PAPER 85-0452] p 224 A85-19761

Experimental study of forward-located jet-interaction nozzles
[AIAA PAPER 85-0454] p 224 A85-19762

Efficient self-consistent viscous-inviscid solutions for unsteady transonic flow
[AIAA PAPER 85-0482] p 225 A85-19779

Application of a variational method for generating adaptive grids
[AIAA PAPER 85-0487] p 226 A85-19784

The application of some lifting-body reentry concepts to missile design
[AIAA PAPER 85-0497] p 279 A85-19791

Ground test experience with large composite structures for commercial transports p 251 A85-21383

A thermoplastic polyimidesulfone p 282 A85-21483

Evaluation of a stalled airfoil analysis program
p 231 A85-21848

Shock-fitting solution of the supersonic flowfield in a rounded internal corner p 232 A85-21856

Scaling of airfoil self-noise using measured flow parameters p 304 A85-21858

Nonreflecting boundary conditions for the complete unsteady transonic small-disturbance equation
p 290 A85-21875

Spectral multigrid methods with applications to transonic potential flow p 316 A85-24448

Heat-transfer distributions for biconics at incidence in hypersonic-hypervelocity real-gas flows
p 319 A85-25478

Development and performance of the NASA Langley Research Center expansion tube/tunnel, a hypersonic-hypervelocity real-gas facility
p 368 A85-25482

Airfoil large-eddy breakup devices for turbulent drag reduction
[AIAA PAPER 85-0520] p 320 A85-25926

The effect of opposing unsteady vorticity on turbulent wall flow
[AIAA PAPER 85-0550] p 321 A85-25943

Active transition fixing and control of the boundary layer in air
[AIAA PAPER 85-0564] p 369 A85-25950

Development of an energy absorbing passenger seat for the B-720 test aircraft p 332 A85-26308

Wing design with attainable leading-edge thrust considerations p 411 A85-26763

Entropy condition satisfying approximations for the full potential equation of transonic flow p 385 A85-26916

Two-dimensional viscous simulation of inlet/diffuser flows with terminal shocks p 386 A85-27091

Hybrid approach to steady transonic normal shock-compressible laminar boundary layer interactions over airfoils with suction
[AIAA PAPER 85-0522] p 386 A85-27876

Control plate for shock-boundary layer interaction
[AIAA PAPER 85-0523] p 387 A85-27877

Viscid/inviscid interaction analysis of separated trailing-edge flows p 390 A85-29076

Analysis of turbulent underexpanded jets. I - Parabolized Navier-Stokes model, SCIPVIS p 391 A85-29080

Newton-like minimal residual methods applied to transonic flow calculations p 458 A85-29081

Euler and Navier-Stokes solutions for supersonic shear flow past a circular cylinder p 391 A85-29090

Stability experiments in the flow over a rotating disk
p 444 A85-29091

Numerical study of a ramjet dump combustor flowfield
p 392 A85-29093

Progress toward magnetic suspension and balance systems for large wind tunnels p 427 A85-29252

Approach and landing technologies for STOL fighter configurations p 414 A85-29254

Discontinuous wing leading edge to enhance spin resistance p 424 A85-29255

Flowfield investigation of a supercruise fighter model
p 392 A85-29256

Noise transmission through aircraft panels
p 460 A85-29258

Theoretical design of acoustic treatment for noise control in a turboprop aircraft p 414 A85-29260

Measured and calculated airloads on a transport wing model p 392 A85-29263

Pressure measurement system for the National Transonic Facility p 445 A85-29568

Multidisciplinary analysis and synthesis - Needs and opportunities
[AIAA PAPER 85-0584] p 534 A85-30227

Optimization methods applied to the aerodynamic design of helicopter rotor blades
[AIAA PAPER 85-0644] p 490 A85-30245

A nonlinear analysis of infinitely long graphite-epoxy cylindrical panels loaded with internal pressure
[AIAA PAPER 85-0770] p 522 A85-30291

Unsteady transonic flow calculations for two-dimensional canard-wing configurations with aeroelastic applications
[AIAA PAPER 85-0585] p 468 A85-30320

Viscous effects on transonic airfoil stability and response
[AIAA PAPER 85-0586] p 468 A85-30321

Measured unsteady transonic aerodynamic characteristics of an elastic supercritical wing with an oscillating control surface
[AIAA PAPER 85-0598] p 469 A85-30327

Transonic test of a forward swept wing configuration exhibiting Body Freedom Flutter
[AIAA PAPER 85-0689] p 491 A85-30356

Exploratory flutter test in a cryogenic wind tunnel
[AIAA PAPER 85-0736] p 515 A85-30360

Review of research on structureborne noise
[AIAA PAPER 85-0786] p 536 A85-30368

Dynamic loads analyses of flexible airplanes - New and existing techniques
[AIAA PAPER 85-0808] p 492 A85-30394

Transonic calculations for a flexible supercritical wing and comparison with experiment
[AIAA PAPER 85-0665] p 470 A85-30407

Far-field noise of a subsonic jet under controlled excitation p 537 A85-30869

Comparison of noise prediction for the X-wing system and a conventional rotor in hover p 493 A85-31953

Design of a flutter suppression system for an experimental drone aircraft p 497 A85-32584

Transonic time responses of the MBB A-3 supercritical airfoil including active controls p 512 A85-32586

Impact of fuselage incidence on the supersonic aerodynamics of two fighter configurations
p 473 A85-32590

Noise transmission through an acoustically treated and honeycomb-stiffened aircraft sidewall
p 537 A85-32592

Analysis of aerothermal loads on spherical dome protuberances p 473 A85-32602

Analysis of turbulent underexpanded jets. II - Shock noise features using SCIPVIS p 537 A85-32605

Viscous shock-layer flowfield analysis by an explicit-implicit method p 474 A85-32612

Some iterative schemes for transonic potential flows
p 474 A85-32624

Refinement of an 'alternate' method for measuring heating rates in hypersonic wind tunnels
p 516 A85-32625

Acoustic shocks in a variable area duct containing near sonic flows p 474 A85-32632

Contributions to the finite element solution of the fan noise radiation problem
[ASME PAPER 84-WA/NCA-1] p 537 A85-32954

A new look at sound generation by blade/vortex interaction
[ASME PAPER 84-WA/NCA-2] p 538 A85-32955

**NASA. Langley Research Center, Hampton, Va.**

Assessment of preliminary prediction techniques for wing leading-edge vortex flows at supersonic speeds

Structures and Dynamics Division research and technology plans for FY 1985 and accomplishments for FY 1984
[NASA-TM-86417] p 605 N85-25895
Exploratory wind-tunnel investigation of a wingtip-mounted vortex turbine for vortex energy recovery
[NASA-TP-2468] p 560 N85-26667
An experimental and analytical study of the aerodynamic interference effects between two Sears-Haack bodies at Mach 2.7
[NASA-TM-85729] p 560 N85-26673
Comparison of wind velocity in thunderstorms determined from measurements by a ground-based Doppler radar and an F-106B airplane
[NASA-TM-86348] p 565 N85-26687
Planning fuel-conservative descents in an airline environmental using a small programmable calculator: Algorithm development and flight test results
[NASA-TP-2393] p 579 N85-26705
Active control landing gear for ground loads alleviation
p 590 N85-26749
NASA/aircraft industry standard specification for graphite fiber toughened thermoset resin composite material
[NASA-RP-1142] p 597 N85-26923
Evaluation of experimental epoxy monomers
[NASA-TM-87476] p 597 N85-26996
Supersonic aerodynamic characteristics of canard, tailless, and aft-tail configurations for 2 wing planforms
[NASA-TP-2434] p 634 N85-27822
Friction and wear behavior of aluminum and composite I-beam stiffened airplane skins
[NASA-TM-86418] p 652 N85-27852
Addition of flexible body option to the TOLA computer program, part 1
[NASA-CR-132732-1] p 652 N85-27855
Addition of flexible body option to the TOLA computer program. Part 2: User and programmer documentation
[NASA-CR-132732-2] p 652 N85-27856
Active control landing gear for ground load alleviation
p 679 N85-27902
Effect of superconducting solenoid model cores on spanwise iron magnet roll control
[NASA-TM-86376] p 683 N85-27915
Background noise measurements from jet exit vanes designed to reduced flow pulsations in an open-jet wind tunnel
[NASA-TM-86383] p 683 N85-27916
Wind-tunnel evaluation of a 21-percent-scale powered model of a prototype advanced scout helicopter
[NASA-TP-2420] p 637 N85-28923
Static investigation of several yaw vectoring concepts on nonaxisymmetric nozzles
[NASA-TP-2432] p 637 N85-28924
Piloted simulation of an algorithm for onboard control of time-optimal intercept
[NASA-TP-2445] p 681 N85-28949
Pressure distribution data from tests of 2.29 M (7.5 feet) span EET high-lift transport aircraft model in the Ames 12-foot pressure tunnel
[NASA-TM-84517] p 709 N85-29912
Inviscid analysis of two supercritical laminar-flow-control airfoils at design and off-design conditions
[NASA-TM-84657] p 739 N85-29920
Lee-side flow over delta wings at supersonic speeds
[NASA-TP-2430] p 739 N85-29921
Experimental and theoretical study of the longitudinal aerodynamic characteristics of delta and double-delta wings at Mach numbers of 1.60, 1.90, and 2.16
[NASA-TP-2433] p 739 N85-29922
Effect of leading-edge load constraints on the design and performance of supersonic wings
[NASA-TP-2446] p 739 N85-29923
Nacelle/pylon/wing integration on a transport model with a natural laminar flow nacelle
[NASA-TP-2439] p 740 N85-29924
High Reynolds number tests of a NASA SC(3)-0712(B) airfoil in the Langley 0.3-meter transonic cryogenic tunnel
[NASA-TM-86371] p 740 N85-29926
Pressure distribution from high Reynolds number tests of a NASA SC(3)-0712(B) airfoil in the Langley 0.3-meter transonic cryogenic tunnel
[NASA-TM-86370] p 740 N85-29927
Low-speed wind-tunnel tests of an advanced eight-bladed propeller
[NASA-TM-86364] p 740 N85-29928
Vapor-screen technique for flow visualization in the Langley Unitary Plan Wind Tunnel
[NASA-TM-86384] p 740 N85-29929
Unsteady transonic flow calculations for interfering lifting surface configurations
[NASA-TM-86432] p 741 N85-29931
A method for computing the core flow in three-dimensional leading-edge vortices
[NASA-TM-87489] p 741 N85-29932
Selected topics in experimental aeroelasticity at the NASA Langley Research Center
[NASA-TM-86436] p 796 N85-30364
Impact dynamics research on composite transport structures
[NASA-TM-86391] p 797 N85-30367

Effects of propeller rotation direction on airplane interior noise levels
[NASA-TP-2444] p 805 N85-30767
Low-speed tests of a high-aspect-ratio, supercritical-wing transport model equipped with a high-lift flap system in the Langley 4- by 7-meter and Ames 12-foot pressure tunnels
[NASA-TP-2097] p 742 N85-31010
Computer programs for smoothing and scaling airfoil coordinates
[NASA-TM-84666] p 742 N85-31011
Transonic calculations for a flexible supercritical wing and comparison with experiment
[NASA-TM-86439] p 742 N85-31012
A new finite element approach: Progress in inviscid flow computations
[NASA-TM-86434] p 798 N85-31450
Study of an efficient long-range Mach 2.7 supersonic transport configuration concept
[NASA-TM-86414] p 829 N85-32110
Preliminary sizing and performance of aircraft
[NASA-TM-86357] p 829 N85-32111
Aerodynamic characteristics of a distinct wing-body configuration at Mach 6: Experiment, theory, and the hypersonic isolation principle
[NASA-TP-2467] p 818 N85-33107
Energy efficient transport technology: Program summary and bibliography
[NASA-RP-1135] p 830 N85-33116
Selecting step sizes in sensitivity analysis by finite differences
[NASA-TM-86382] p 856 N85-33538
Ground-based and in-flight simulator studies of flight characteristics of a twin-fuselage passenger transport airplane during approach and landing
[NASA-TP-2451] p 895 N85-34144
Nozzle wall roughness effects on free-stream noise and transition in the pilot low-disturbance tunnel
[NASA-TM-86389] p 910 N85-34355
Langley aeronautics and space test highlights, 1984
[NASA-TM-87585] p 920 N85-35151
Wingtip vortex propeller
[NASA-CASE-LAR-13019-1] p 892 N85-35194
Dual towline spin-recovery device
[NASA-CASE-LAR-13076-1] p 895 N85-35200
A preliminary evaluation of a failure detection filter for detecting and identifying control element failures in a transport aircraft
[NASA-TM-87576] p 896 N85-35204

p 453 A85-28776

Acoustic shocks in a variable area duct containing near sonic flows p 474 A85-32632

Investigations of flow field perturbations induced on slotted transonic-tunnel walls p 83 N85-12018

Contamination and distortion of steady flow field induced by discrete frequency in aircraft gas turbines
[AD-A147092] p 294 N85-16073

Aerodynamic improvements by discrete wing tip jets
[AD-A148981] p 330 N85-18964

**Texas A&M Univ., College Station.**

Phase averaged acoustic measurements for a Mach number 0.6 jet
[AIAA PAPER 84-2320] p 61 A85-10867

Design parameters for flow energizers
[AIAA PAPER 84-2409] p 74 A85-13570

Practical flight test method for determining reciprocating engine cooling requirements p 167 A85-16237

Analytical determination of propeller performance degradation due to ice accretion
[AIAA PAPER 85-0339] p 264 A85-20867

Analysis and testing for rotordynamic coefficients of turbulent annular seals with different, directionally-homogeneous surface-roughness treatment for rotor and stator elements
[ASME PAPER 84-TRIB-31] p 289 A85-21293

Experimental aerodynamic characteristics of an NACA 0012 airfoil with simulated ice p 252 A85-21844

Design parameters for flow energizers
p 547 A85-35582

Performance degradation of helicopter rotor in forward flight due to ice p 746 A85-42937

Rotordynamic analysis of the SSME turbopumps using reduced models
[NASA-CR-171170] p 53 N85-10355

Heat transfer and pressure drop in blade cooling channels with turbulence promoters
[NASA-CR-3837] p 128 N85-12315

Analysis and testing for rotordynamic coefficients of turbulent annular seals with different, directionally homogeneous surface-roughness treatment for rotor and stator elements p 188 N85-14134

Analysis for leakage and rotordynamic coefficients of surface roughened tapered annular gas seals
p 188 N85-14135

Theory versus experiment for the rotordynamic coefficients of annular gas seals. Part 1: Test facility and apparatus
[NASA-CR-174409] p 374 N85-19417

Propeller propulsion system integration: State of technology survey
[NASA-CR-3882] p 398 N85-21119

Electrooculographic measurement, fatigue and variability of performance in simulated aircraft flight
p 760 N85-29948

**Texas Instruments, Inc., Lewisville.**

Optimal disturbance suppression with application to wind shear
[AIAA PAPER 85-1886] p 844 A85-45909

**Texas Technological Univ., Lubbock.**

Flow visualization of lateral jet injection into swirling crossflow
[AIAA PAPER 85-0059] p 209 A85-19490

Electromagnetic resonances of cylinders and aircraft model with resistive wires
[NASA-CR-174203] p 192 N85-15319

Preliminary results from the unsteady airfoil model USTAR2

Birds and aviation
[AD-P004177] p 402 N85-19939

Birds and aircraft engine strike rates
[AD-P004184] p 403 N85-19946

Control of mammals at airports
[AD-P004192] p 404 N85-19957

Airport site selection and design
[AD-P004193] p 428 N85-19959

Reducing gull use of some attractions near airports
[AD-P004195] p 428 N85-19962

**Tokai Univ., Hiratsuka (Japan).**

Flow visualization of lateral jet injection into swirling crossflow
[AIAA PAPER 85-0059] p 209 A85-19490

**Tokyo Univ. (Japan).**

Computation of flow around a circular cylinder in a supercritical regime
[AIAA PAPER 85-1660] p 715 A85-40756

Some numerical analyses of flows with separation
p 605 N85-28616

**Toledo Univ., Ohio.**

Full two-dimensional transient solutions of electrothermal aircraft blade deicing
[AIAA PAPER 85-0413] p 248 A85-19734

Wake effects on the aerodynamic performance of horizontal axis wind turbines
[NASA-CR-174920] p 702 N85-29364

**Toronto Univ., Downsview (Ontario).**

A study of crashworthiness of light aircraft fuselage structures: A numerical and experimental investigation
[UTIAS-286] p 149 N85-14803

Fluid-dynamic model of a downburst
[UTIAS-271] p 609 N85-27441

**Toronto Univ. (Ontario).**

Crashworthiness of light aircraft fuselage structures: A numerical and experimental investigation
p 20 N85-10399

Critical conditions for the automatic control of landing from decision height in variable winds
[UTIAS-284] p 154 N85-14630

A model of hypersonic two-dimensional oblique detonation wave ramjet
[UTIAS-TN-257] p 891 N85-34139

**Transamerica Delaval, Inc., Santa Monica, Calif.**

Flow characteristics of a partially submerged liquid pickup
[DE85-008744] p 899 N85-28276

**Transportation Research Board, Washington, D.C.**

Issues in air transport
[PB85-121374/GAR] p 333 N85-18030

**Transportation Systems Center, Cambridge, Mass.**

General aviation activity and avionics survey
[AD-A149572] p 384 N85-21103

**TRW, Inc., Cleveland, Ohio.**

Energy efficient engine. Volume 2. Appendix A: Component development and integration program
[NASA-CR-173085] p 34 N85-10991

**TRW, Inc., Redondo Beach, Calif.**

An experimental study of three-dimensional shock wave/turbulent boundary layer interactions in a supersonic flow
[AIAA PAPER 85-1566] p 711 A85-40891

**Turbomeca S. A. - Brevets Szydlowski, Bordes (France).**

Design and test requirements for development of today's engines p 266 N85-15737

Nondestructive tests of ceramic components for aircraft turbines p 583 N85-26718

**Tuskegee Inst., Ala.**

An improved computer model for prediction of axial gas turbine performance losses
[NASA-CR-174246] p 265 N85-15724

U

**United Technologies Corp., East Hartford, Conn.**

Analysis of airfoil leading-edge separation bubbles
[AIAA PAPER 83-0300] p 79 A85-15327

Calculation of confined swirling flows
[AIAA PAPER 85-0060] p 285 A85-19491

A linearized unsteady aerodynamic analysis for transonic cascades p 229 A85-20744

Energy efficient engine flight propulsion system preliminary analysis and design report
[NASA-CR-174701] p 28 N85-10947

Energy efficient engine combustor test hardware detailed design report
[NASA-CR-167945] p 28 N85-10950

Helicopter rotor
[CH-637890-A5] p 574 N85-25245

**United Technologies Research Center, East Hartford, Conn.**

Three-dimensional inviscid flow analysis of turbofan forced mixers
[AIAA PAPER 85-0086] p 210 A85-19510

A procedure for the calculation of supersonic flows with strong viscous-inviscid interaction
[AIAA PAPER 85-0166] p 213 A85-19562

Viscid/inviscid interaction analysis of separated trailing-edge flows p 390 A85-29076

Generalized wake geometry for a helicopter in forward flight and effect of wake deformation on airloads
p 472 A85-31986

Development and evaluation of a generic active helicopter vibration controller p 496 A85-32004

Numerical investigation of internal high-speed viscous flows using a parabolic technique
[AIAA PAPER 85-1409] p 632 A85-39766

Analysis of transitional separation bubbles on infinite swept wings
[AIAA PAPER 85-1685] p 717 A85-40770

Helicopter rotor blade design for minimum vibration
[NASA-CR-3825] p 19 N85-10032

High temperature static strain sensor development program p 29 N85-10959

Laser speckle technique for burner liner strain measurements p 29 N85-10960

External fuel vaporization study, phase 2
[NASA-CR-174079] p 45 N85-11252

Extended aeroelastic analysis for helicopter rotors with prescribed hub motion and blade appended penduluum vibration absorbers
[NASA-CR-172455] p 65 N85-12036

Basic study of bladed disk structural response
[AD-A146226] p 112 N85-12061

High-temperature optically activated GaAs power switching for aircraft digital electronic control
[NASA-CR-174711] p 116 N85-12901

Unsteady stall penetration of an oscillating swept wing
[AD-P004156] p 323 N85-17941

Synthesized airfoil data method for prediction of dynamic stall and unsteady airloads
[NASA-CR-3672] p 327 N85-18005

**Universal Energy Systems, Inc., Dayton, Ohio.**

Multi-ducted inlet combustor research and development
[AD-A153753] p 673 N85-28946

**Universities Space Research Association, Columbia, Md.**

Design and performance of a fixed, nonaccelerating guide vane cascade that operates over an inlet flow angle range of 60 deg
[ASME PAPER 84-GT-75] p 475 A85-32964

**University Coll. of Swansea (Wales).**

Finite element methods for high speed flows
[AIAA PAPER 85-1533] p 791 A85-40963

**University Corp. for Atmospheric Research, Boulder, Colo.**

A preliminary intercomparison between numerical upper wind forecasts and research aircraft measurements of jet streams
[NASA-CR-167884] p 914 N85-35539

**University of Northern Illinois, De Kalb.**

Successful control of gulls and other birds at a sanitary landfill
[AD-P004198] p 453 N85-19965

**University of Southern California, Los Angeles.**

Genesis of unsteady separation
[AD-P004173] p 370 N85-17958

Effects of temperature variation among droplets in an evaporating fuel spray p 520 N85-22562

**University of Western Ontario, London.**

Wavelength selection and growth of Goertler vortices
p 73 A85-12703

## V

**Valparaiso Univ., Ind.**

Finite-volume scheme for transonic potential flow about airfoils and bodies in an arbitrarily-shaped channel
p 734 A85-42967

**Vanderbilt Univ., Nashville, Tenn.**

Transitional, hypervelocity aerodynamic simulation and scaling in light of recent flight data
[AIAA PAPER 85-1028] p 621 A85-37661

The role of freestream turbulence scale in subsonic flow separation
[NASA-CR-174172] p 87 N85-12870

**VDO-Luftfahrtgeraete Werk Adolf Schindling G.m.b.H., Frankfurt (West Germany).**

Realization and testing of an experimental color display system for general aviation helicopters and aircraft
[BMFT-FB-W-84-042] p 262 N85-16872

**Vehicle Research Corp., Pasadena, Calif.**

Leading edge separation criterion for an oscillating airfoil
[AD-P004175] p 325 N85-17960

**Vigyan Research Associates, Inc., Hampton, Va.**

An attached flow design of a noninterfering leading edge extension to a thick delta wing
[AIAA PAPER 85-0350] p 220 A85-19689

An investigation of the tabbed vortex flap
p 547 A85-35583

Comparison of advanced turboprop installation on swept and unswept supercritical wings at transonic speeds
[AIAA PAPER 85-1264] p 630 A85-39686

Effect of a wing-tip mounted pusher turboprop on the aerodynamic characteristics of a semi-span wing
[AIAA PAPER 85-1286] p 631 A85-39700

Natural laminar flow airfoil design considerations for winglets on low-speed airplanes
[NASA-CR-3853] p 87 N85-12863

The generation of rolling moments with the superconducting solenoid model
[NASA-CR-172520] p 360 N85-18068

Method for the prediction of the installation aerodynamics of a propfan at subsonic speeds
[NASA-CR-3887] p 476 N85-22369

An experimental investigation of propfan installations on an upswept supercritical wing at transonic Mach numbers
[NASA-CR-172605] p 742 N85-31013

**Villanova Univ., Pa.**

Aerostructure nondestructive evaluation by thermal field detection. Phase 2: Technique refinement and quantitative determination of flaw detection capabilities
[AD-A149622] p 417 N85-21155

**Virginia Associated Research Center, Newport News.**

An inerference assessment approach for a three-dimensional slotted tunnel with sparse wall pressure data p 84 N85-12030

**Virginia Polytechnic Inst. and State Univ., Blacksburg.**

Noise control characteristics of synchrophasing - An analytical investigation
[AIAA PAPER 84-2369] p 17 A85-10898

Noise control characteristics of synchrophasing - An experimental investigation
[AIAA PAPER 84-2370] p 17 A85-10899

Wavelength selection and growth of Goertler vortices
p 73 A85-12703

Calculation of unsteady fan rotor response caused by downstream flow distortions
[AIAA PAPER 84-2282] p 76 A85-13960

A vortex-lattice method for general, unsteady aerodynamics p 144 A85-18511

Experiments on the stability of crossflow vortices in swept-wing flows
[AIAA PAPER 85-0493] p 231 A85-20873

Measurements of a zero-pressure-gradient boundary layer blown by an asymmetric jet p 390 A85-29077

Vortex induced lift on a flat plate with a curved forward-facing flap p 394 A85-30175

A nonlinear analysis of infinitely long graphite-epoxy cylindrical panels loaded with internal pressure
[AIAA PAPER 85-0770] p 522 A85-30291

An improved source model for aircraft interior noise studies
[AIAA PAPER 85-0787] p 537 A85-30389

The effect of source location on the structural-acoustic interaction of an infinite elastic shell
[AIAA PAPER 85-0788] p 523 A85-30390

Optimal symmetric flight with an intermediate vehicle model p 497 A85-32780

Onboard near-optimal climb-dash energy management
p 497 A85-32781

Energy-modelled climb and climb-dash - The Kaiser technique p 572 A85-35350

Classical and neo-classical cruise-dash optimization
p 650 A85-39212

Effects of non-uniform velocity profiles on dual jets in a crossflow
[AIAA PAPER 85-1674] p 716 A85-40763

Optimization of cascade blade mistuning. I - Equations of motion and basic inherent properties
p 771 A85-42365

Energy management of three-dimensional minimum-time intercept
[AIAA PAPER 85-1781] p 838 A85-43841

Mechanisms of transmission and control of low-frequency sound in aircraft interiors
[SAE PAPER 850879] p 885 A85-50111

On-board near-optimal climb-dash energy management p 21 N85-10931

The lateral-directional characteristics of a 74-degree Delta wing employing gothic planform vortex flaps
[NASA-CR-3846] p 82 N85-12009

Numerical simulation of the subsonic wing-rock phenomenon p 116 N85-12064

GC-FTIR (Fourier Transform Infrared Spectrometry) of jet fuels
[AD-A148272] p 285 N85-17155

An improved source model for aircraft interior noise studies
[NASA-CR-172517] p 305 N85-17668

Electronic displays: Their strengths and weaknesses for advanced high performance aircraft
p 349 N85-19664

Optimal symmetric flight studies
[NASA-CR-172508] p 426 N85-21176

Experimental and analytical investigation of fan flow interaction with downstream struts
[NASA-CR-175756] p 556 N85-25201

An analytical investigation of dynamic coupling in nonlinear, geared rotor systems p 607 N85-27218

Development and application of optimum sensitivity analysis of structures
[NASA-CR-175857] p 608 N85-27257

A survey of the turbulence in the marine surface layer for the operation of low-Reynolds number aircraft
[AD-A154133] p 800 N85-30558

Energy management of three-dimensional minimum-time intercept
[NASA-CR-176174] p 887 N85-35186

**Virginia Univ., Charlottesville.**

Hydraulic forces on a centrifugal impeller undergoing synchronous whirl p 187 N85-14124

**Vrije Universiteit, Brussels (Belgium).**

Turbulence structure in the boundary layers of an oscillating airfoil
[AD-A153631] p 637 N85-28926

## W

**Warner Robins Air Materiel Area, Robins AFB, Ga.**

Electronics/avionics depots in the United States Air Force Warner Robins Air Logistics Center
[AD-P004000] p 71 N85-11981

**Warsaw Univ. (Poland).**

Meteorological measurements with motor gliders in Poland p 915 N85-35555

**Washington Univ., Seattle.**

Crack arrest in structural ceramics p 41 A85-11671

Blade tip geometry - A factor in abrading sintered seal material p 110 A85-13714

Spatial variation of sea surface temperature and flux-related parameters measured from aircraft in the JASIN experiment
[AD-A149321] p 130 A85-15425

Metallurgical and mechanical phenomena due to rubbing of titanium against sintered powder Nichrome
p 291 A85-22281

An experimental investigation and numerical prediction of thermomechanical phenomena in high speed rotor tip rubbing p 351 A85-25442

Transonic shock-wave/turbulent boundary-layer interactions in a circular duct p 474 A85-32610

Viscous shock-layer flowfield analysis by an explicit-implicit method p 474 A85-32612

An experimental study of three-dimensional shock wave/turbulent boundary layer interactions in a supersonic flow
[AIAA PAPER 85-1566] p 711 A85-40691

Experimental and numerical investigation of supersonic flow through a square duct
[AIAA PAPER 85-1622] p 714 A85-40728

Measurements of turbulent correlations in supersonic flows with longitudinal surface curvature
[AIAA PAPER 85-1656] p 715 A85-40754

Multiple transonic shock-wave/turbulent boundary-layer interaction in a circular duct p 869 A85-48533

**Washington Univ., St. Louis, Mo.**

Design of helicopter rotor blades for optimum dynamic characteristics
[NASA-CR-176076] p 760 N85-31044

**Waterloo Univ. (Ontario).**

Transient motion of hypersonic vehicles including time history effects
[AIAA PAPER 85-0201] p 268 A85-19585

**Watteeuw (M. C.) N.V., Bruges (Belgium).**

Case depth on flanks of gears for helicopter gearboxes p 528 N85-23780

**Weapons Systems Research Lab., Adelaide (Australia).**

Wind-tunnel investigation of the aerodynamic characteristics of the Standard Dynamics Model in coning motion at Mach 0.6
[AIAA PAPER 85-1828] p 814 A85-43869

**Weapons Systems Research Lab., Salisbury (Australia).**

Wind tunnel tests on a tube-launched missile configuration with a deflectable nose control and a novel wrap-around fin stabiliser
[AR-003-696] p 8 N85-10003

**Welding Inst., Cambridge (England).**
Laser drilling of aeroengine components

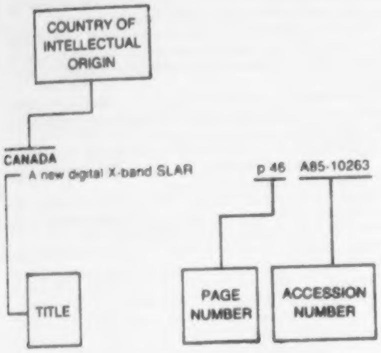
# FOREIGN TECHNOLOGY INDEX

**AERONAUTICAL ENGINEERING** / *A Continuing Bibliography*
1985 Cumulative Index

JANUARY 1986

### Typical Foreign Technology Index Listing



Listings in this index are arranged alphabetically by country of intellectual origin. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the citation in the abstract section.

## A

**ARGENTINA**

Applications of the conformal mapping method to the solution of mechanical vibrations problems p 528 N85-23103

**AUSTRALIA**

A characteristics approach to swept shock-wave/boundary-layer interactions p 73 A85-12717

Air flow and particle trajectories around aircraft fuselages. I - Theory p 74 A85-13651

Air flow and particle trajectories around aircraft fuselages. II - Measurements p 106 A85-13652

Reynolds-stress measurements in a turbulent trailing vortex p 77 A85-14244

Inspection intervals for fail-safe structure p 124 A85-14899

Repair of Mirage III aircraft using the BFRP crack-patching technique p 137 A85-16244

Bonded repairs to surface flaws p 137 A85-16245

Stability of squeeze film damped multi-mass flexible rotor bearing systems
[ASME PAPER 84-TRIB-45] p 289 A85-21296

Flow field studies on a biconic model in high enthalpy non-equilibrium flow p 320 A85-25480

Measurements of density and velocity profiles in non-equilibrium laminar hypersonic boundary layers in air p 320 A85-25483

The properties of isolated and coupled Savonius rotors p 451 A85-27346

An energy approach to linearizing squeeze-film damper forces p 440 A85-27479

An explanation for the asymmetry of the modulation sidebands about the tooth meshing frequency in epicyclic gear vibration p 441 A85-27480

Ageing of structural film adhesives - Changes in chemical and physical properties and the effect on joint strength p 434 A85-27913

Modelling turbulent recirculating flows in complex geometries p 445 A85-29967

Vibration analysis of a rotating blade using dynamic discretization p 446 A85-29968

Attempt to regulate restrictive commercial practices in the field of air transportation within a transnational antitrust legal and institutional framework p 539 A85-30999

Reducing the effects of rivet holes on fatigue life by adhesive bonding p 693 A85-37472

Shock tunnel measurements of heat transfer in a model scramjet
[AIAA PAPER 85-0908] p 658 A85-37582

Stagnation point heat transfer in hypersonic high enthalpy flow
[AIAA PAPER 85-0973] p 620 A85-37623

Density and velocity profiles in non-equilibrium laminar boundary layers in air
[AIAA PAPER 85-0976] p 620 A85-37626

Low density aerothermodynamics
[AIAA PAPER 85-0994] p 620 A85-37640

An automatic navigation and aspect sensing system for X-ray astronomy p 643 A85-38314

Stability of the thin-jet model of the unsteady jet flap p 626 A85-38997

The free interaction in a supersonic flow over a porous wall p 626 A85-39021

Condition monitoring of jet engines p 835 A85-43649

Laboratory studies related to in-flight acoustic emission monitoring p 905 A85-47428

Bonded repair of damage p 910 A85-50063

Wind tunnel tests on a tube-launched missile configuration with a deflectable nose control and a novel wrap-around fin stabiliser
[AR-003-696] p 8 N85-10003

Observations of lightweight Doppler system accuracy
[AD-A145968] p 96 N85-12049

The in-flight estimation and indication of cumulative fatigue damage to helicopter gears
[ARL/AERO-R-164] p 104 N85-12050

Estimation of helicopter performance using a program based on blade element analysis
[AD-A146341] p 105 N85-12055

A comparative study of the finite element and boundary element methods as applied to a boundary value problem of a harmonic function
[AD-A146018] p 132 N85-12627

A preliminary study of using a strain-gauged balance and parameter estimation techniques for the determination of aerodynamic forces on a model in a very short duration wind tunnel
[AD-A146473] p 190 N85-15145

Calculation of the velocity field generated by a helicopter main and tail rotors in hover
[AD-A147731] p 239 N85-16833

A comparison of fatigue lives under a complex and a much simplified flight-by-flight testing sequence
[ARL/STRUC-TM-386] p 344 N85-18052

Long term durability of urea formaldehyde glued joints removed from Vampire aircraft
[AD-A149053] p 346 N85-18985

A conformal mapping suitable for problems involving interaction between given geometries and known far fields
[AD-A149050] p 376 N85-19744

Description of a technique to measure spray distribution in an air stream
[AD-A149780] p 398 N85-21122

On the application of compatibility checking techniques to dynamic flight test data
[ARL/AERO-R-161] p 416 N85-21151

Fatigue crack propagation in mirage 1110 wing main spar specimens and the effects of spectrum truncation on life
[ARL/STRUC-R-405] p 417 N85-21152

Deflection model of a CT4-A undercarriage
[AD-A149778] p 417 N85-21156

Interactions between F-111 fuselage fuel tank sealants. Part 2: Variation in performance properties of polysulfides after contact with polyester degradation products
[AD-A149777] p 436 N85-21368

Finite element analysis of problems associated with life enhancement techniques
[ARL/STRUC-R-404] p 451 N85-21676

Calibration loading of a strain-gauged diverless helicopter weapon recovery system
[AD-A151486] p 575 N85-25253

Tensile and fracture toughness properties of Mirage III spars
[AR-003-019] p 605 N85-25899

A study of the methods for evaluating the noise impact of a proposed airport on a community p 609 N85-25957

Flight trials of a modified gulfstream commander carrying external stores
[AD-A153376] p 653 N85-27859

Further investigations to improve the fatigue life of the Mirage 1110 wing main span
[ARL/STRUC-TM-397] p 654 N85-28938

Description and illustration of the use of CRACKS IV
[AD-A153543] p 701 N85-29325

A phase-locked frequency multiplier for the signal averaging of the vibration of the Wessex helicopter input spiral bevel pinion
[AD-A154914] p 829 N85-32113

Proposal for modifications to the Wessex helicopter main rotor gearbox vibration monitoring program
[AD-A155196] p 830 N85-32117

Generation by conformal mappings of aerofoil sections and of certain other simple shapes suitable for both aerodynamic and stress-concentration problems
[AD-A154901] p 819 N85-33112

Guidelines for the evaluation of visual approach slope indicators
[ARL/SYS-R-32] p 880 N85-34132

Determination of instrument errors by compatibility checking: Results from dynamic flight test data
[ARL/AERO-R-162] p 889 N85-34137

Fatigue lives of specimens representing critical locations in Mirage 3 spars under Australian and Swiss test spectra
[ARL-STRUC-R-415] p 867 N85-35187

Maintenance computer for Tornado p 348 A85-25854
Application of scaling laws for the flyover jet noise to three departure procedures for the Boeing 727-200 advanced [AIAA PAPER 84-2359] p 377 A85-26319

Validation of flight-body system simulations
[MBB-UA-837-84-OE] p 457 A85-27989

Thermoluminescence studies on Jilin meteorite
p 463 A85-28043

Permanent fasteners for light-weight structures
p 443 A85-28479

The behavior of turbocompressors and turbocompressor installations during the pumping of the compressor
p 443 A85-28792

Investigation of modern flight-control problems with regard to minimal fuel consumption, with consideration of arrival-time limitations, air-traffic density, and onboard real-time computation p 409 A85-28794

Numerical determination of detached internal flow with the example of a radial compression tunnel
p 443 A85-28796

Determination of liquid-fuel prevaporization and premixing in gas-turbine combustion chambers
p 443 A85-28798

ITSC '83: Proceedings of the Tenth International Thermal Spraying Conference, Essen, West Germany, May 2-6, 1983 p 443 A85-28801

A comparison of different calculation methods for axisymmetric fields in convergent-divergent nozzles
p 390 A85-29047

Calculation of the disturbance to combustion chamber film cooling due to air injection through a row of jets
p 420 A85-29048

Flight time enhancement on the basis of a cyclically controlled dynamic duration flight p 424 A85-29049

Unsteady laminar boundary-layer separation on oscillating configurations p 391 A85-29089

Condensation phenomena in supersonic nozzles
p 393 A85-29989

Investigations of the influence of taper on the characteristic values of rotating annular turbine cascades in the transonic flow regime p 394 A85-30170

Design of a CFRP-wing for the alpha-jet major panel tests
[AIAA PAPER 85-0725] p 490 A85-30278

A piloted simulator investigation of decoupling helicopters by using a model following control system
p 511 A85-31955

Procedure for the calculation of the characteristics of axial, respectively radial, one or multistage thermal flow machines, taking into consideration also the effect of adjustable guide devices p 598 A85-33402

System-theoretical solution of the failure diagnosis problem using the example of a flight engine
p 580 A85-33404

Commission stacker - Incorporation in a total logistic concept
[MBB-UT-36-84-OE] p 541 A85-35073

Aspects of a see-saw tail rotor balancing
[MBB-UD-423-84-OE] p 572 A85-35251

BK 117 for dual pilot IFR operation
[MBB-UD-422-84-OE] p 572 A85-35253

Properties of glass and carbon fiber fabrics used in helicopter rotors
[MBB-UD-424-84-OE] p 541 A85-35254

Electroforming of complex parts and heat exchanger systems
[MBB-Z-42-85-OE] p 599 A85-35256

Determination of forward edge eddies in delta wings
p 547 A85-35260

Coating composition and the formation of protective oxide layers at high temperatures p 596 A85-36234

Separated flows p 600 A85-36302

Adaptive control of an elastic rotor with a magnetic bearing p 600 A85-36321

Viscous influence in axisymmetric laminar supersonic flow over blunt bodies p 552 A85-36339

Theoretical determination of pressure coefficient Cp on double wedged delta wing and its agreement with experimental results p 552 A85-36340

Validity of solution of three-dimensional linearised boundary value problem for axial disturbance velocity u, in transonic-supersonic flow p 553 A85-36341

Near-sonic subsonic flow around a profile - In particular: the foot-point structure of a shock and the flow-reverse theorem p 553 A85-36342

Design of a transonic flow with compression shock
p 553 A85-36344

Wing optimization and fuselage integration for future generation of supersonic aircraft p 618 A85-37212

Numerical solution of the minimum-time flight of a glider through a thermal by use of multiple shooting methods
p 638 A85-37489

European transonic wind tunnel p 681 A85-37491

Pitot pressure and heat transfer measurements in hydrazine thruster plumes

Window on science visit to the USA, 21 March - 22 April, 1984 [VTH-LR-428] p 432 N85-20011

Crack growth geometry in aluminum alloy sheet material under flight simulation loading. 1: A comparison between TWIST and miniTWIST FALSTAFF and short FALSTAFF. 2: Effect of truncating high loads [VTH-LR-441] p 436 N85-20119

Numerical integration of the unsteady full-potential equation with applications to transonic flow about a two-dimensional airfoil [NLR-MP-84022-U] p 400 N85-21130

The influence on IR emission of engine parameters for an afterburn case. A sensitivity study on NATO infrared air target model (NIRATAM) version: 0.0 [AD-B089311L] p 422 N85-21171

Unsteady transonic pressure measurements on a semi-span wind-tunnel model of a transport-type supercritical wing (Lann model). Part 2: Pressure distributions (plotted) and plots of the vibration modes [AD-A130488] p 449 N85-21579

Experiences with transition fixation in the high-speed regime at NLR p 480 N85-23715

Modifications of flight by flight load sequences to provide for good fracture surface readability p 532 N85-24330

Analysis of transonic aerodynamic characteristics for a supercritical airfoil oscillating in heave, pitch and with oscillating flap p 554 N85-25175

Application of time-linearized methods to oscillating wings in transonic flow and flutter p 585 N85-25182

Three-dimensional boundary layer research at NLR p 603 N85-25787

Conical stagnation points in the flow around an external corner [VTH-LR-396] p 561 N85-26680

A computer program for the drag prediction of subsonic, turbine powered aircraft in the en-route configuration [VTH-LR-412] p 561 N85-26681

A curved test section for research on transonic shock wave-boundary layer interaction [VTH-LR-414] p 561 N85-26682

Numerical solution of transonic normal shock wave-boundary layer interaction using the Bohning-Zierep model [VTH-LR-416] p 562 N85-26683

Protective coatings for aircraft structures: A review [VTH-LR-413] p 577 N85-26704

Static longitudinal stability and control characteristics of the Fokker F27 Friendship calculated by simple handbook methods [VTH-LR-394] p 588 N85-26728

Application of linear optimal control theory to the design of the elevator control system of the DHC-2 Beaver experimental aircraft [VTH-LR-411] p 588 N85-26729

How to handle failures in advanced flight control systems of future transport aircraft p 591 N85-26752

Investigation of the influence of some paint systems and water displacing corrosion inhibitors on anodic undermining corrosion of aluminum 2024 clad alloy [VTH-LR-443] p 598 N85-27009

Prediction of free-field noise levels from aircraft flyover measurements [VTH-LR-427] p 612 N85-27647

Upwind-difference methods for aerodynamic problems governed by the Euler equations [REPT-84-23] p 635 N85-27834

Transonic Mach number determination in a blow-down wind tunnel with solid walls and a downstream throat [VTH-LR-402] p 636 N85-27835

Aerodynamic research in preparation for a new Dutch transport aircraft with supercritical wings [B8580077] p 636 N85-27836

Rotterdam Airport and the Common Market p 641 N85-27840

Flying in spite of the weather [NLR-MP-84021-U] p 644 N85-27847

Developments in the area of air traffic control systems and the relation with meteorology [NLR-MP-84029-U] p 645 N85-27848

A system for take-off and landing measurements (STALINS) [B8580072] p 645 N85-27849

Parameter identification results of tests in nonsteady symmetric flight with the Hawker Hunter Mk 7 [NLR-TR-83042-U] p 653 N85-27860

New materials and techniques for aircraft structures [B8580074] p 653 N85-27861

Fan noise suppression in turbofan engines [B8580076] p 671 N85-27872

Testing of materials and coatings for jet engine components under simulated operational conditions [B8580073] p 672 N85-27873

How to handle failures in advanced flight control systems of future transport aircraft p 679 N85-27905

Construction 1976-1980: Design, manufacturing, calibration of the German-Dutch wind tunnel (DNW) p 683 N85-27913

The application of numerical control (NC) in manufacturing wind tunnel models [B8580078] p 689 N85-28140

Engineering significance of fatigue thresholds and short fatigue cracks for structural design [NLR-MP-84001-U] p 700 N85-28430

Frangibility of obstacles at airports [NLR-MP-84002-U] p 700 N85-28431

Research on structures and materials [B8580080] p 700 N85-28432

Operations research [B8561887] p 704 N85-28712

Technical services at NLR [B8561888] p 705 N85-28871

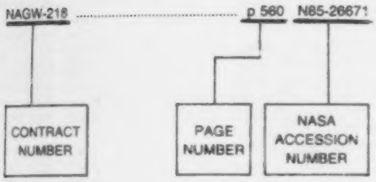
1985 Cumulative Index

JANUARY 1986

### Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

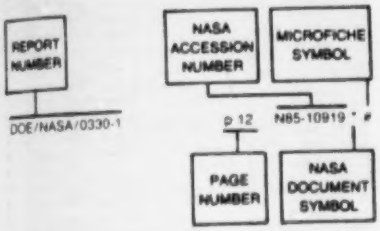
# REPORT NUMBER INDEX

### Typical Report Number Index Listing



Listings in this index are arranged alphanumerically by report number. The page number indicates the page on which the citation is located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.
